
What is artificial intelligence ?

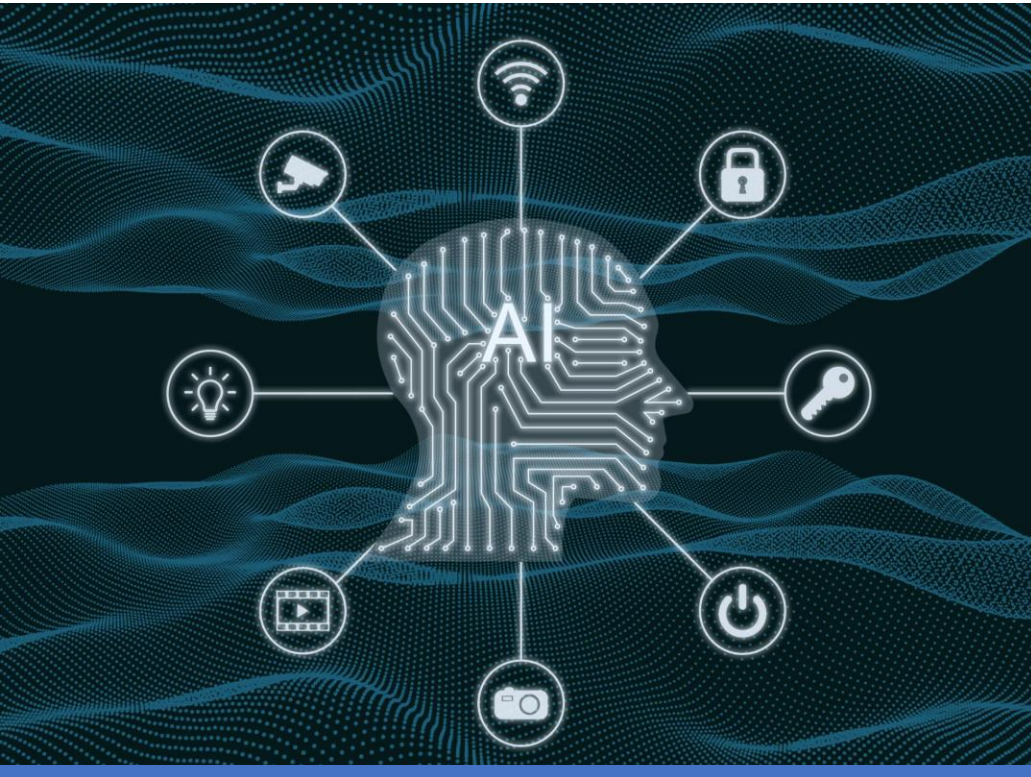

Points of discussion

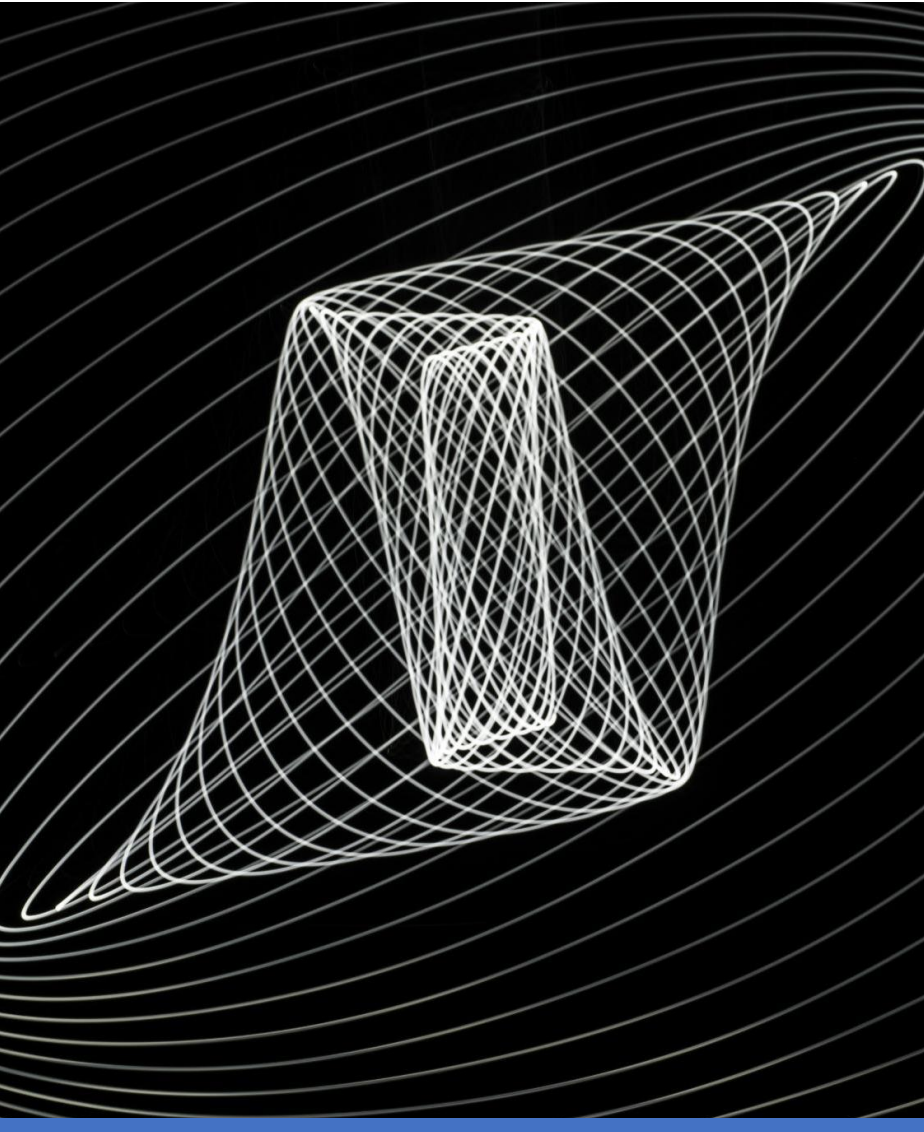

- Definition of AI
- Definition of generative AI
- AI in personal and professional life
- Survey synthesis
- Risks

Definition of AI

Artificial Intelligence (AI) is a part of computer science

- Making systems and machines
- Learning
- Making decisions
- Finding patterns
- Understanding language
- Solving problems

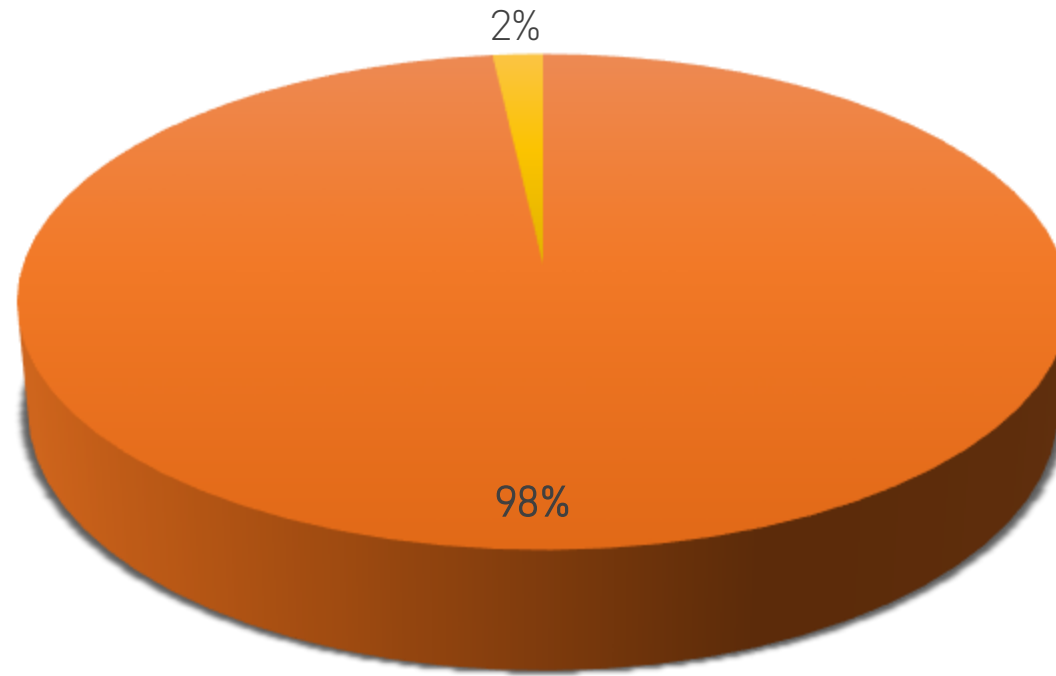

Definition of generative AI

Generative AI is a part of AI

It focuses on creating new things:

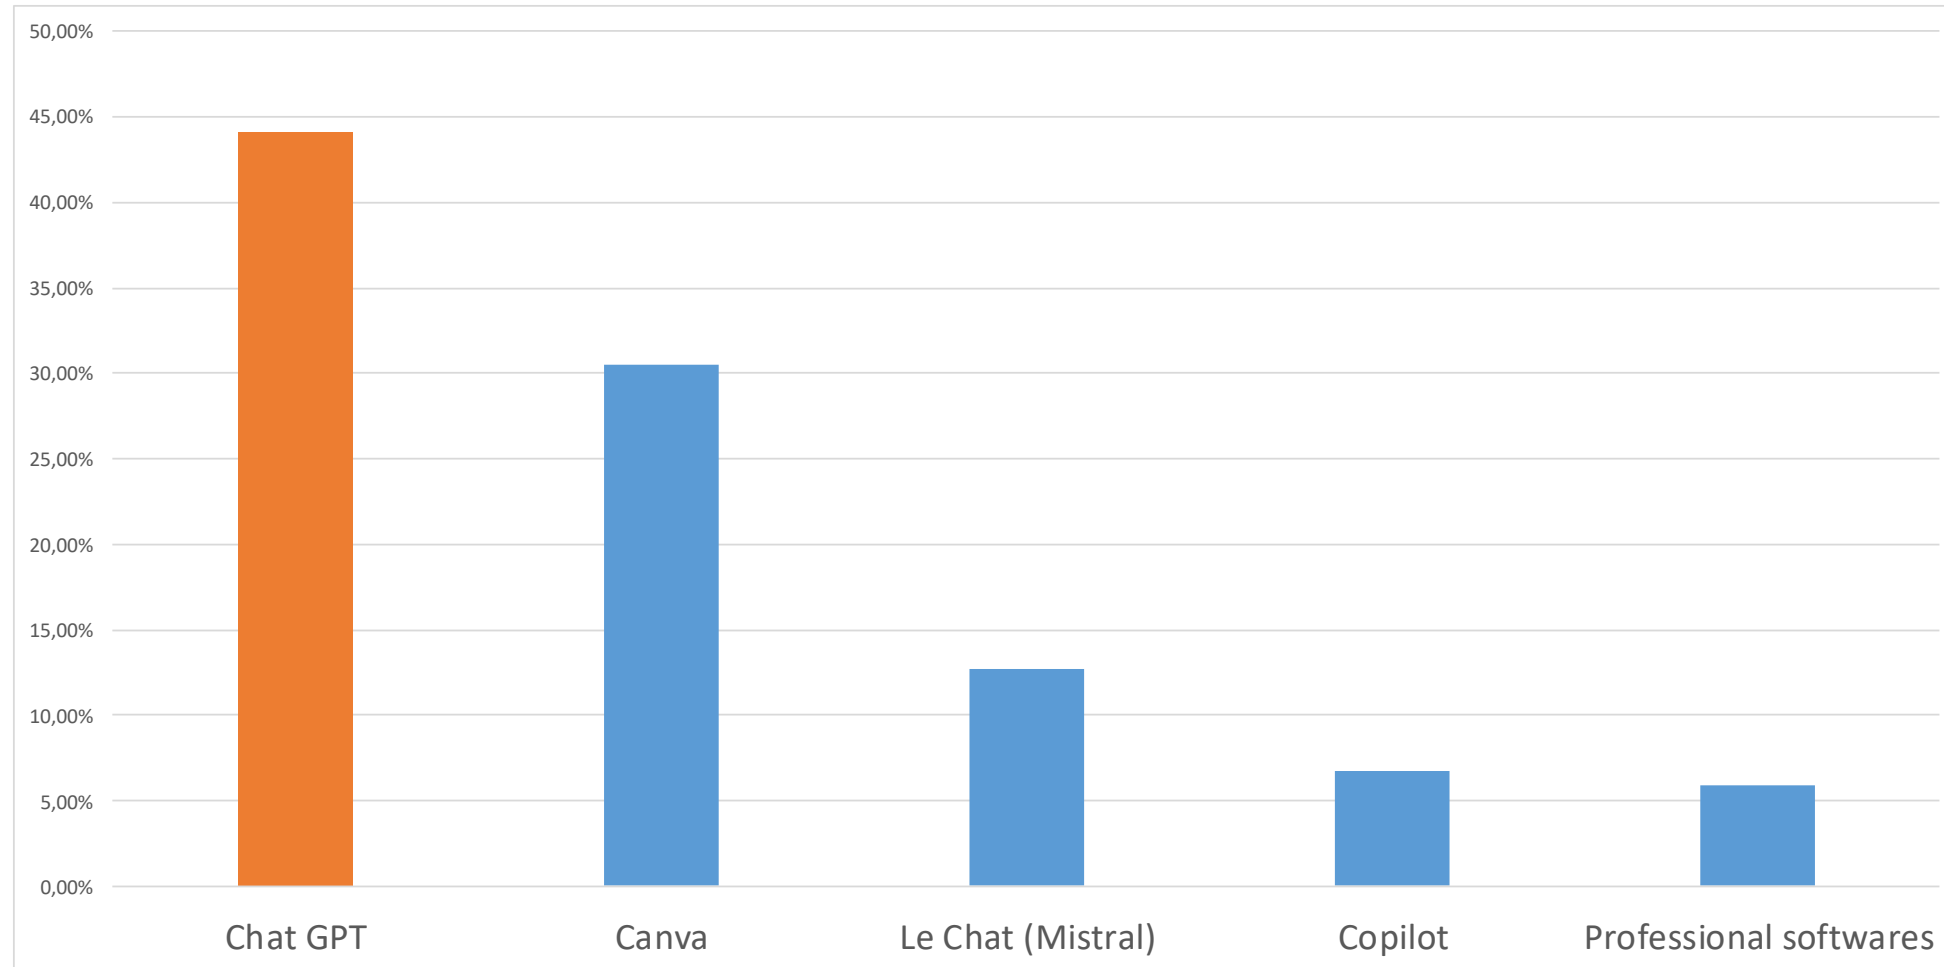

- Pictures
- Text
- Music
- Videos

Have you ever used artificial intelligence?

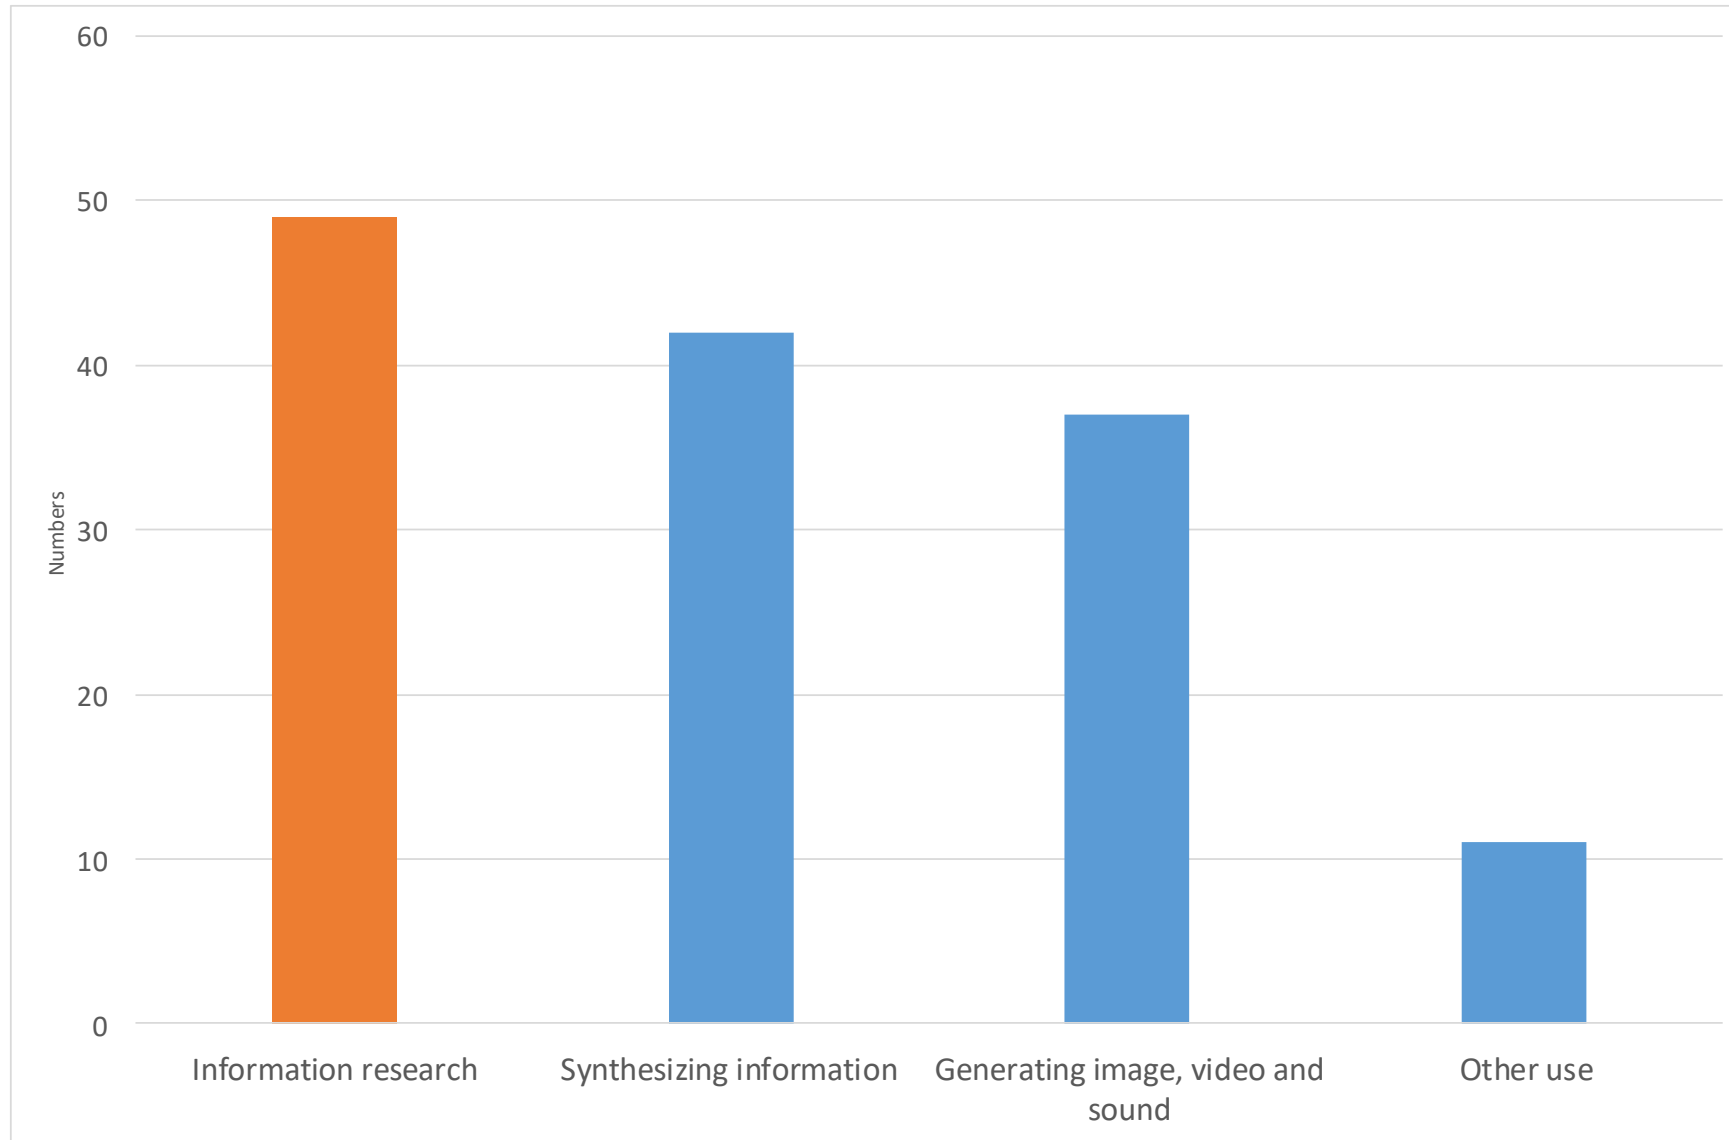

■ YES ■ NO

Which artificial intelligence do you use the most?

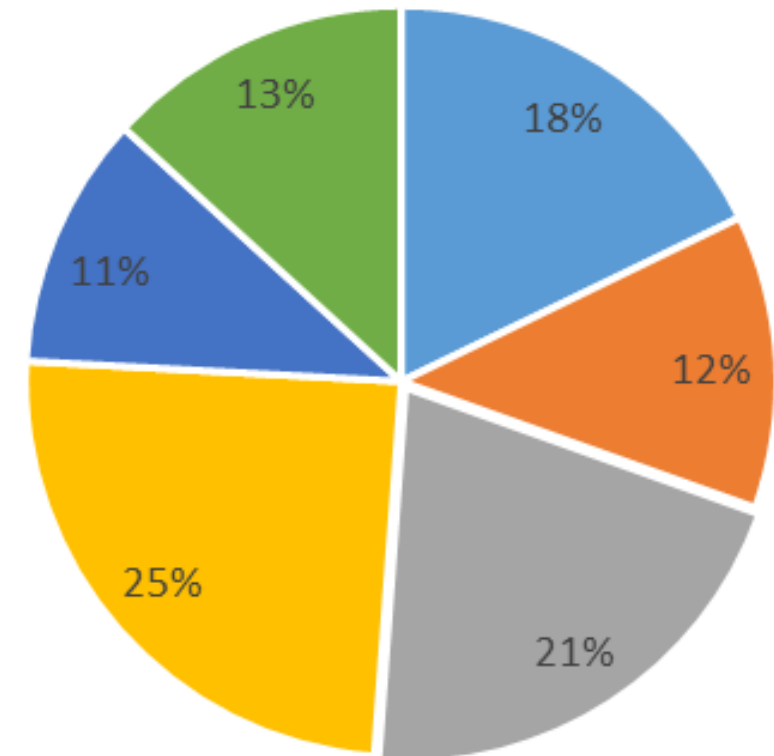

What for ?

In professional life

- Spelling Correction
- Generating Original Content
- Generation of Text, Images, Videos, and Other Original Content
- Information Research
- Enhancing work efficiency
- Translating content

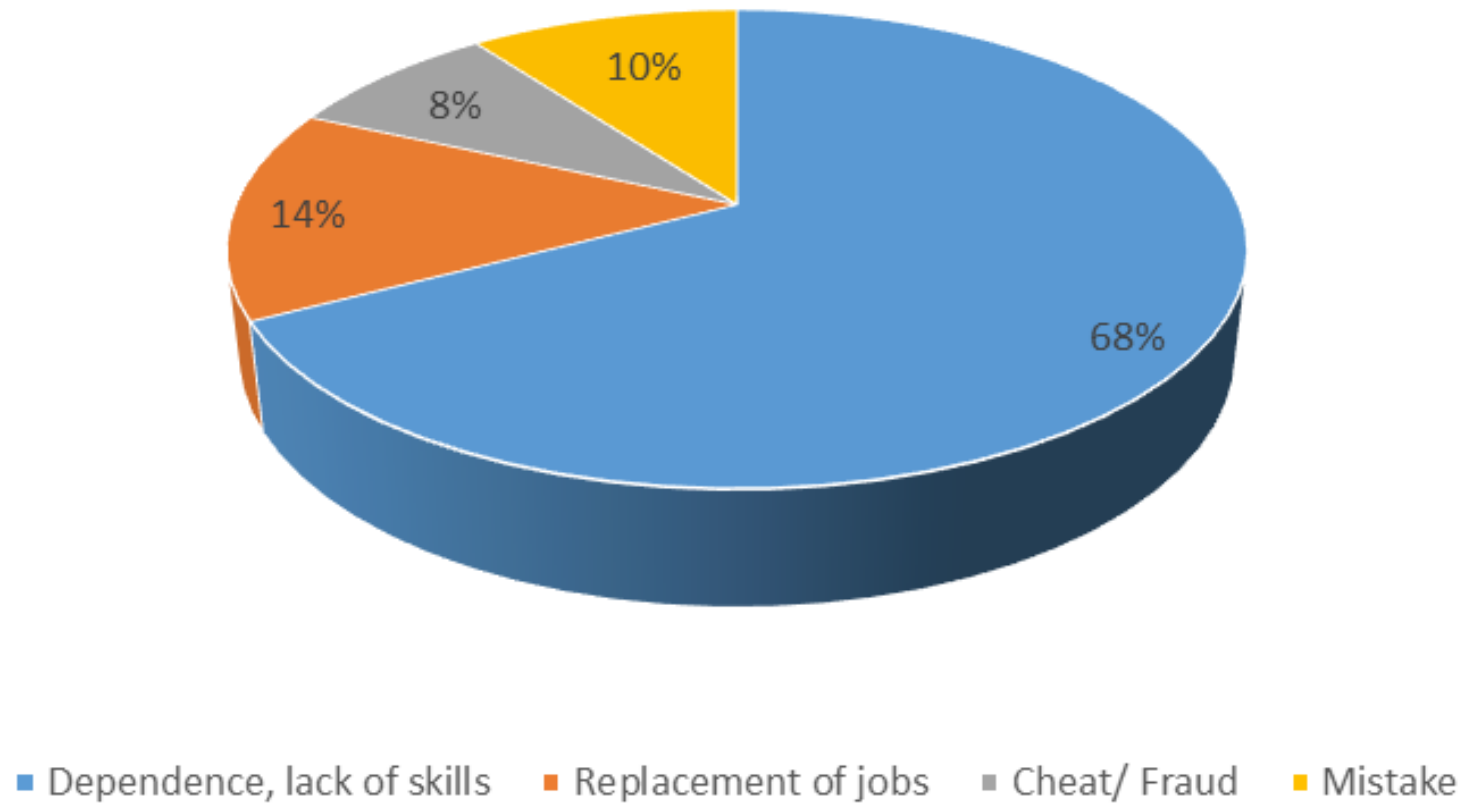

AI in personal life

In personal life:

- Virtual assistants
- Social media
- Health apps

RISKS

Data security and privacy

Importance of data security

Consequences of data breaches

Robust security measures

Impact on jobs and the economy

- Transformation of the Labor Market
- Economic Challenges
- Reskilling of Workers

Conclusion

Artificial intelligence is overused

Dependent

Could destroy jobs
